

The Road Ahead

Being in business for a decade and competently training hundreds of professionals on operations, values, ethics and effectiveness of several denominations involved in supply chain business, SCM PROGRAMS will continue its unwavering effort to conserve the values of integrity, coherence and articulacy in every initiative which incorporates the legendary Japanese practice of *Omotenashi* (a term for outstanding hospitality - enhanced by anticipating the customer's needs) as an integral part of our company to bring in world-class quality services to every client or individual.

Having core competency in providing business solutions through consulting, bespoke feasibility studies and professional training programs in supply chain, SCM PROGRAMS intends to focus on development of sustainable supply chain solutions particularly focussing on advanced food processing and agri cold-chain, innovative packaging solutions, and improving food supply chain which help in reducing waste and saving energy.

As per UN Global Compact, only 15 per cent of the Sustainable Development Goals are on track to be delivered by 2030 — 30 per cent have stalled or gone into reverse. With SDGs universal call to action to make the planet more inhabitable and endurable, SCM PROGRAMS mindful of its resources and in its own humble way is committed to completely focus all its future trainings and assignments on implementing, propagating and bringing in insights, innovations and capacity development initiatives that is a resolute part of the 17 SDGs to make the world a better place for future.

Considering the health of the planet, it is vitally important to take action in our communities and contribute to global goals in some significant way keeping the SDGs as the centre stage to create a more ideal society. Recognising the interdependence of the world and coming together for designing future societies, a paradigm shift is required for addressing immediate challenges.

SCM PROGRAMS is also proud and honoured to be selected as the first Co-Creation Partner from India of TEAM EXPO 2025 that intends to support the multiple Co-Creation Challenges to promote the opportunities in sustainable developments in the future during the prestigious EXPO 2025 Osaka Kansai Japan.

We see SDGs as a driver of growth and sustainability as the future. Global trends for future calls for a 'Responsible Chain'. Welcome to the new SCM PROGRAMS.
